

QA Bug Report – Calculator Application

Tester: Tomáš Bednář

Date: 25 Dec 2025

Application: Calculator

Version: 1.0 (test build)

Platform: Desktop

Input methods tested: On-screen keypad, Physical keyboard

Attachments:

- Screenshots included in this report
 - Screen recordings are provided in folder “screen_recordings”
-

BUG-001 — On-screen keypad does not allow entering more than two consecutive digits 9”

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- On-screen keypad is used
- Input field is empty

Steps to reproduce:

1. Tap digit 9 on the on-screen keypad
2. Tap digit 9 again
3. Tap digit 9 for the third time

Expected result:

- Input field displays 999

Actual result:

- Third digit 9 is not registered

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-001”

Notes:

- Issue observed only with on-screen keypad
- Physical keyboard input is not affected

BUG-002 — On-screen keypad maps digit 7” as 4”

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- On-screen keypad is used
- Input field is empty

Steps to reproduce:

1. Tap digit 7 on the on-screen keypad

Expected result:

- Display shows digit 7

Actual result:

- Display shows digit 4

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-002”

Notes:

- Issue not reproducible when using physical keyboard
-

BUG-003 — Application cannot correctly process operations where the first operand has 6 or more digits

BUG-003.1 — Addition with large first operand

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- Input method: any
- Input field is empty

Steps to reproduce:

1. Enter 123456 + 2
2. Press =

Expected result:

- Result 123458 is displayed

Actual result:

- Incorrect result or error is displayed

Frequency: Always (10/10)

Attachments:

- Screenshot included

BUG-003.2 — Subtraction with large first operand

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- Input method: any
- Input field is empty

Steps to reproduce:

1. Enter 222222 - 11111
2. Press =

Expected result:

- Result 211111 is displayed

Actual result:

- Incorrect result is displayed

Frequency: Always (10/10)

Attachments:

- Screenshot included

BUG-003.3 — Multiplication with large first operand

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- Input method: any
- Input field is empty

Steps to reproduce:

1. Enter 123456×3
2. Press =

Expected result:

- Result 370368 is displayed

Actual result:

- Incorrect result or error is displayed

Frequency: Always (10/10)

Attachments:

- Screenshot included

BUG-003.4 — Division with large first operand causes application crash

Severity: Critical

Priority: P0

Precondition:

- Calculator application is launched
- Input method: any
- Input field is empty

Steps to reproduce:

1. Enter $888888 \div 12$
2. Press =

Expected result:

- Result 74074 is displayed
- Application remains stable

Actual result:

- Application crashes

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-003.4”
-

BUG-004 — Division by zero causes application crash

Severity: Critical

Priority: P0

Precondition:

- Calculator application is launched
- Input method: any
- Input field is empty

Steps to reproduce:

1. Enter $5 \div 0$
2. Press =

Expected result:

- Error message “Division by zero” is displayed
- Application remains responsive

Actual result:

- Application crashes

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-004”
-

BUG-005 — Physical keyboard: Enter key does not trigger calculation

Severity: Medium

Priority: P2

Precondition:

- Calculator application is launched
- Physical keyboard is used
- Input field is empty

Steps to reproduce:

1. Type 3 + 4 using physical keyboard
2. Press Enter

Expected result:

- Expression is evaluated
- Result 7 is displayed

Actual result:

- No action occurs

Frequency: Always (10/10)

Attachments:

- None
-

BUG-006 — Application does not validate manually entered expressions containing “=”

Severity: Medium

Priority: P2

Precondition:

- Calculator application is launched
- Physical keyboard is used
- Input field is empty and selected

Steps to reproduce:

1. Manually type $3 - 5 = 50$ into the input field

Expected result:

- Application recalculates the expression or rejects invalid input

Actual result:

- Input is accepted without validation

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-006”
-

BUG-007 — Application launches with predefined expression in input field

Severity: Low

Priority: P3

Precondition:

- Application is closed

Steps to reproduce:

1. Launch the application

Expected result:

- Input field is empty

Actual result:

- Input field contains predefined expression $1 + 1 = 2$

Frequency: Always (10/10)

Attachments:

- Screenshot included

BUG-008 — Operations fail when the second operand has 6 or more of the same digits

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- Input method: any
- Input field is empty

Steps to reproduce:

1. Enter 12 + 111111
2. Press =

Expected result:

- Result 111123 is displayed
- Application remains responsive

Actual result:

- Incorrect result is displayed

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-008”

Notes:

- Happens with +, -, *, /
-

BUG-009 — After multiplication, the first digit of the second operand is duplicated

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- On-screen keypad is used
- Input field is empty

Steps to reproduce:

1. Enter $1234 \times$
2. Tap digit 5 on the on-screen keypad

Expected result:

- Display shows 1234×5

Actual result:

- Display shows 1234×55

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-009”

Notes:

- Issue observed only with multiplication
 - Issue not reproducible when using physical keyboard
-

BUG-010 — Result display does not adapt to long numeric values

Severity: Medium

Priority: P2

Precondition:

- Calculator application is launched
- Input field is empty

Steps to reproduce:

1. Enter $1111 + 111111$
2. Press =

Expected result:

- Result is fully visible to the user
- Display adjusts size or font to fit the full value

Actual result:

- Result exceeds the display area
- Part of the value is cut off and not visible

Frequency: Always (10/10)

Attachments:

- Screen recording "BUG-010"
-

BUG-011 — Calculated result can be edited using Backspace or Delete key on keyboard

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- Input field is empty
- Using application keypad and keyboard

Steps to reproduce:

1. Enter 8 + 8
2. Press =
3. Focus the result field
4. Press Backspace or Delete

Expected result:

- Calculated result is read-only
- User cannot modify the result

Actual result:

- Result can be partially or fully edited
- User can change the displayed value to an incorrect result

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-011”
-

BUG-012 — Result is not recalculated after modifying expression and confirming calculation

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- Input field is empty

Steps to reproduce:

1. Enter $12 + 6$
2. Press =
3. Modify the expression to $1 + 6$
4. Press =

Expected result:

- Result is recalculated
- Correct result 7 is displayed

Actual result:

- Result is not recalculated
- Error is displayed only after confirmation

Frequency: Always (10/10)

Attachments:

- Screen recording “BUG-012”
-

BUG-013 — Calculator cannot continue calculation using previously calculated result

Severity: High

Priority: P1

Precondition:

- Calculator application is launched
- Input field is empty

Steps to reproduce:

1. Enter $4 + 2$
2. Press $=$
3. Append $\times 4$
4. Press $=$

Expected result:

- Previous result (6) is used as the first operand
- Expression 6×4 is evaluated correctly
- Result 24 is displayed

Actual result:

- Expression is not recalculated
- Error is displayed after confirmation

Frequency: Always (10/10)

Attachments:

- Screen recording "BUG-013"
-
